

Atrium Health
Levine Cancer Institute

Prostate cancer is one of the leading causes of death in men.
When detected early, the survival rate for men with prostate cancer is high.

FREE HIGH RISK PROSTATE CANCER SCREENING

Free screenings include blood tests to check glucose, lipids, PSA and testosterone levels.

To take part, you must be a man who:

- Is uninsured and between 40 and 70 years old
- Has not had a prostate-specific antigen (PSA) test within the last year and not be actively followed by a urologist
